

Random Number Generator Certificate

Operator: PartyGaming

URL: www.partypoker.com

This is to certify that [iTech Labs](http://www.itechlabs.com) have evaluated the Random Number Generator (RNG) used for the Poker games in the PartyPoker system and found that the RNG complies with the relevant iTech Labs standards*.

The PartyPoker Poker games use a widely recognized algorithm to generate the random numbers. The numbers generated by this RNG have passed Marsaglia's "diehard" tests for statistical randomness.

iTech Labs have also evaluated the scaling of the numbers and shuffling of the cards. Chi-squared tests were conducted on large number of shuffled decks, each set ranging from 500 to 100,000 decks, for a total of over 700,000 shuffled decks. These tests were applied to suits 1-4, ranks 1-13 and cards 1-52. iTech Labs have found that the card sequences are unpredictable and non-repeatable.

The certified code for the RNG has been fingerprinted.

Disclaimer.

While it is not possible to test all possible scenarios in a laboratory environment, iTech Labs have conducted a level of testing appropriate for a component test of this type.
